

Engineered, Procured and Ready to Construct.

Fully designed as a nominal 600 MW GE steam turbine, this Unit 1 power block is a coal-fired electric generating unit in waiting — making it or its equipment a perfect solution for a utility that projects demand and demands efficiency.

Ready for re-siting and permitting, this plant design comes with complete documentation of the power block specifications and calculations — and its major equipment is 100% delivered. If you have interest in either the entire plant design or the equipment, they are priced to move. Quickly.
